THE SUN PROBLEM IS HISTORY

Winter Springs, FL - Barcode Automation, inc. (BAI), in Winter Springs, Florida has resolved the "Sun Problem" with the release of the BA-220 DualBeam Barcode Reader. Barcode readers in the past have often been "blinded" by the sun shining directly into the reader, or being reflected off the barcode. With the major breakthroughs achieved by BAI in laser and electronic technology, the sun does not interfere in any way with the ability of the BA-220 to read barcodes.

BAI President and CEO Doug Jarrett said, "The BA-220 is the culmination of ten years of R&D. It is without question the most reliable and cost effective device on the market today for Automatic Vehicle Identification (AVI) and Vehicle Access Control. Incorporating the most advanced laser technology, along with the elegantly simplistic design concepts pioneered by BAI, the BA-220 will set the standards in the industry for years to come."

The BA-220 DualBeam Barcode Reader will connect to existing access control panels via Wiegand 26bit format, or it can operate as a standalone controller, which allows direct control of one gate. It can also directly interface with a computer security system through USB or RS232. All components are mounted in a NEMA 4 aluminum housing with internal temperature and humidity control. A transaction log retains the last 2,000 decal numbers with time and date. It can be configured at the factory, or easily configured on site. BAI also offers cost effective barcode decals in 56 color combinations.

Barcode Automation, inc. is the leading manufacturer of barcode systems for automatic vehicle identification and access control, offering products through a network of dealers and integrators nationwide. The BA-220 DualBeam Barcode Reader provides the user a highly effective tool for managing right of entry into private or secured areas such as neighborhoods, business parking lots, airports, hospitals or other sites requiring high standards of vehicle access control.
